SUMMARY

Software Engineer with 2 years of experience developing and deploying production-grade Flutter mobile and Python/.NET backend applications. Experienced in building scalable systems and end-to-end solutions; I apply software architecture, deep learning model design, fine-tuning, and modern software development methodologies to build high-performance applications.

EXPERIENCE

Malahi — Software Engineer

Dec 2025 – Aug 2026

Riyadh, Saudi Arabia — Remote

- Actively contributed to the development of Flutter-based CM30 payment and field operations applications for 500+ smart vending machines, and implemented their backend integrations.
- NearPay payment system: played an active role in its integration with the payment terminals on the vending machines; worked on NFC-based payment transactions and inter-device communication processes.
- Contributed to the development of the admin panel using NET 9.0.; worked on inventory analytics, automated maintenance alerts, and dynamic reward mechanisms.
- Developed a Hangfire-based scheduled dynamic discount mechanism, contributing to a 25% increase in sales during peak hours.

Visight Technology — Junior Software Engineer

Jun 2025 – Dec 2025

Kocaeli, Türkiye

- Developed the backend services and admin panel of a multi-tenant biometric authentication platform end to end; delivered user management, KYC tracking, and audit logging for 25+ partner companies.
- Reduced admin panel load times from 5 seconds to under 1 second through query optimization, server-side pagination, database indexing, and Redis caching.
- Improved system stability and performance by resolving database lock contention issues that occurred during concurrent transactions.
- Developed a silent JWT token refresh mechanism to maintain session continuity during long-running document scanning operations.

Visight Technology — Software Engineer Intern

Jan 2025 – May 2025

Kocaeli, Türkiye

- Developed the mobile application and SDK components of the biometric authentication platform.
- Developed the mobile-side integrations and user flows for identity and document verification processes.

TECHNICAL SKILLS

Mobile Development: Flutter (BLoC, Cubit, Provider, Riverpod, Clean Architecture, SDK Development)

Backend and API: Python (FastAPI, Django, Flask), .NET 8 (C#, ASP.NET Core Web API, EF Core, LINQ, CQRS, MediatR, FluentValidation, SignalR), RabbitMQ, RESTful API Design, WebSocket, JWT, OAuth 2.0

Machine Learning and Artificial Intelligence: Classical ML, PyTorch, GenAI, RAG, Model Fine-tuning and Evaluation

Web and Frontend: Angular, JavaScript

Databases and Data Management: PostgreSQL, MS SQL Server, MySQL, SQLite, Firestore, Redis

Cloud, DevOps, and Infrastructure: Firebase (Authentication, Cloud Functions), Google Cloud Platform, Railway, Render, Nginx, Ngrok

Software Architecture and Engineering Practices: Clean Architecture, MVC, MVVM, SOLID Principles, SDLC, Data Structures and Algorithms

Security, IoT, and Connectivity: Device Sensors, BLE and NFC Integration, RBAC, Application Security Best Practices

Tools and Collaboration: Docker, Git, GitHub, GitLab, Postman, Publishing on Google Play and the App Store

EDUCATION

Bachelor's Degree in Computer Engineering, Bartın University

Oct 2021 – Jun 2025 | GPA: 3.42/4.00

Thesis: AI-Powered Mobile Application for the Visually Impaired

AI Application Development Program (1-Year Scholarship), AI and Technology Academy

Nov 2024 – Sep 2025 | Remote

SELECTED PROJECTS

Mobile Applications

TurVia — Smart Tourism and Tour Management App · Flutter, FastAPI, Mapbox

- Developed a tourism app that connects travelers with tour agencies, with place discovery, custom tour route creation, advertising, and subscription features, and published it on Google Play and the App Store.

Links: [Google Play](#) | [App Store](#)

KURTAR — IoT- and AI-Based Disaster Response Platform · Flutter, IoT, BLE, WebSocket, Time Series

- Served as a Research Fellow on this TÜBİTAK 1001-funded seismic research project, contributing to mobile application development and technical research.
- Developed end to end the Flutter mobile application, featuring map-based incident visualization, offline-first BLE communication, E2EE messaging, RSSI/magnetometer-based positioning, and role-based access.
- Developed two companion field applications that record high-frequency sensor data for seismic research and perform real-time on-device AI inference/validation.

Web Dashboards

Kurtar Command Dashboard · Angular, .NET, WebSocket, Redis, PostgreSQL

- Live command center with role-based access for the KURTAR mobile application: real-time earthquake/incident mapping, shortest safe route determination for rescue teams, field response team tracking, and resource, incident, and alert management.

TurVia Admin Dashboard · Angular, .NET, Redis, PostgreSQL

- Developed the internal admin dashboard for managing the TurVia platform, featuring real-time analytics, agency and user management, reservation and subscription tracking, instant notifications, and role-based access control.

Backend / API

FastAPI Real-Time Chat API · PostgreSQL, Redis, WebSocket, Docker

Django REST E-Commerce API · DRF, PostgreSQL, JWT, Docker

Links: [GitHub](#)

CERTIFICATES

- Honor Certificate, Bartın University (Jun 2025) — awarded in recognition of outstanding academic achievement upon graduating with honors.
- Mobile Application Development with Google Flutter, BTK Akademi (2024)
